

ESTUDIO PARA LA REGULACIÓN Y GESTIÓN
DE LOS RECURSOS HÍDRICOS
SUBTERRÁNEOS DEL SISTEMA ACUÍFERO
"MEDIODÍA" (ALICANTE)

1ª FASE
DETERMINACIÓN DEL RÉGIMEN
HIPERANUAL DE DESCARGA

TOMO III/IV

ANEXO II: SERIE HISTÓRICA DE DESCARGA

Empresa consultora: INVESTIGACIÓN Y DESARROLLO DE
RECURSOS NATURALES, S.A. (IDRENA)

Octubre de 1989

31933

SERIE HISTÓRICA DE DESCARGA
PERIODO 1974/75-1984/85

Las 133 hojas que se incluyen a continuación contienen la serie histórica (periodo 1974/75-1984/85) de los caudales diarios, junto con sus respectivas medias mensuales y anuales, correspondientes a los manantiales de Bolata y los tres de Sagra, cuyas descargas fueron controladas en conjunto en la estación de aforo E-51, y a la galería de La Cava, controlada en la estación de aforo E-52.

A partir de esas dos series de valores, se efectuó una reconstrucción de su suma, y se realizó una estimación de la descarga correspondiente a las tres fuentes de Sagra, así como de las salidas laterales subterráneas hacia el Cuaternario aluvial del río Girona. La base en la que se han apoyado estas dos estimaciones ha estado en la serie de aforos individuales realizados en 1988 y 1989 en cada una de las emergencias no forzadas (manantiales, galerías, zanjas, etc.) representativas de la descarga del sistema acuífero Mediodía.

Como dato de referencia, se han representado en una primera columna los valores diarios de precipitación registrada en Fontilles.

El encabezamiento de las siete columnas de caudales tiene la siguiente significación:

- CAVA s.c. : Aforos calculados para la galería de La Cava a partir de medidas de escala en la estación E-52, tal como viene registradas en los correspondientes listados (sin ninguna corrección).
- BO.+SA. s.c. : Aforos calculados para la fuente de Bolata y las tres de Sagra, a partir de medidas de escala en la estación E-51, tal como vienen registradas en los correspondientes listados (sin ninguna corrección).
- CA.+BO.+SA. s.c. : Suma de las dos columnas anteriores.

- CA.+BO.+SA. rec. : Reconstrucción manual de la suma reflejada en la columna anterior, haciendo uso de criterios hidrológicos, y teniendo en cuenta el funcionamiento de las derivaciones.
- SAGRA est. : Serie de caudales estimados para las tres fuentes de Sagra, en función de la suma de los correspondientes a CAVA, BOLATA y SAGRA, según se indica en el apartado 2.4.4.3. del tomo I/IV.
- Q RIO GIRONA est. : Serie de caudales estimados para las salidas laterales subterráneas hacia el Cuaternario aluvial del río Girona, en función de la suma de los correspondientes a CAVA y BOLATA, según se indica en el apartado 2.4.4.4. del tomo I/IV.
- TOTAL est. : Caudal total estimado para las salidas naturales (no forzadas) del sistema acuífero Mediodía, equivalentes, por tanto, a los recursos del mismo.
